Hospital, Veterinary, Shipboard, Type 1938

SOURCE: Veterinary Department Headquarters, Tachikawa, Japan.

IMPORTANCE: Not previously reported.

DESCRIPTION: This shipboard veterinary hospital unit is composed of metal bound wooden cases, 27 1/2" x 12" x 14 1/2". Each case is equipped with two metal drop handles and two metal hasps on the hinged lid that can be locked. The cases are strongly reinforced with metal on the edges and corners and each weighs approximately 30 pounds when packed.

The cases are painted dark green with the Veterinary Corps insignia on the front and ends. On the lid and ends are the markings "Shipboard Veterinary Chest" and the numbers 1 to 5.

On the under side of the lid of each case is an inventory of the contents and a heavy canvas pouch. Each case contains smaller, nested, wooden boxes for holding the articles in an orderly manner.

In case No. 4 is an oxygen generator and oxygen inhalator set (see Fig. 2). The generator contains one substance which burns to produce heat and a second substance which produces oxygen upon heating; probably carbon and some peroxide. The gas is led off through a filter pipe, a deodorizing tube, a washing bottle and a stopcock to the inhalator nose tube. Directions state that one generator will produce a total of 150 liters of oxygen over a period of 30 minutes. Trial use proved it rather undependable.

Other equipment of special interest is the stupe or pneumonia jacket in Case #5

COMMENT: This set is used on board ship both coming to and evacuating from the battle front. It is designed to take care of 250 to 300 horses for a short trip and is to be re-stocked each time it reaches port.

This set is the latest model developed about 1938. Inventory reports on earlier models will be made on a subsequent report.

Each veterinary officer will have in addition to this set his regular T/E set described in a subsequent report.
